

Helio

Your next idea, in orbit.

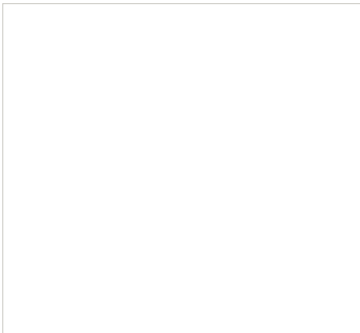

A developer cloud that makes deploying globally distributed applications feel immediate and clear.

A geometric compute core branches toward three deployment nodes, expressing one application distributed across a global network.

Clear space
Keep a quarter of the symbol height around every lockup. Use the monochrome mark over photography.

Design direction
A pearl developer console with a workspace sidebar, cobalt request analytics, compact deployment ledger, inline release details, and a focused graphite build dialog. Connected regional topology and quiet code recipes extend the workspace.

A voice for Helio

Helio is a developer workspace built around the life of an application. A pearl sidebar gives projects and environments a clear home; a wide cobalt traffic plot connects request volume, response health, and latency to a selected hour. The deployment ledger opens each commit into its build details, while a focused release dialog traces compilation, distribution, configuration errors, and recovery. A region view reveals the connected compute core, with concise code recipes and visible usage limits below the console. Compact typography, pale surfaces, and precise signal colors keep dense information calm. Its geometric identity expresses one application reaching a distributed network.
